

Are you blind to employee web abuse?

WebController

The business issue

With a far superior Internet connection at the office than at home, it is not surprising that **staff misuse of the Internet** has become a serious concern.

There are a real threats facing your business. Lost productivity has a high cost and disciplinary meetings are not an effective use of time.

The Department of Industry's latest information security breaches survey* reports that **17% of UK businesses** suffered **staff misuse of web access**. **41%** of this misuse involved **staff accessing inappropriate websites**, including accessing illegal material.

The threats

- **Business continuity** - web-based viruses, trojans, worms and spyware are a threat to business operations and can incur you the cost from damaged IT infrastructure.
- **Legal** - UK legislation makes employers responsible for the conduct of its employees and for protecting employees from offensive web content. There have been many high profile cases of businesses in court for the wrong reasons.
- **Network resource usage** - employees can feel the temptation of using corporate resources to host applications or download free music. Is this the best use of your business' resources?

WebController: Internet-level web security solution

WebController provides everything a business requires to define and enforce all aspects of web security and usage policies. The combination of world-class heuristics technology, complemented by a network of threat experts means that web threats are analysed and defenses updated immediately.

- **Access Manager** allows you to define and enforce employee Internet usage.
- **Threat Manager** provides multi-tier protection of all web content, blocking 100% of malware and executable files before they reach your network.

Comprehensive management and control

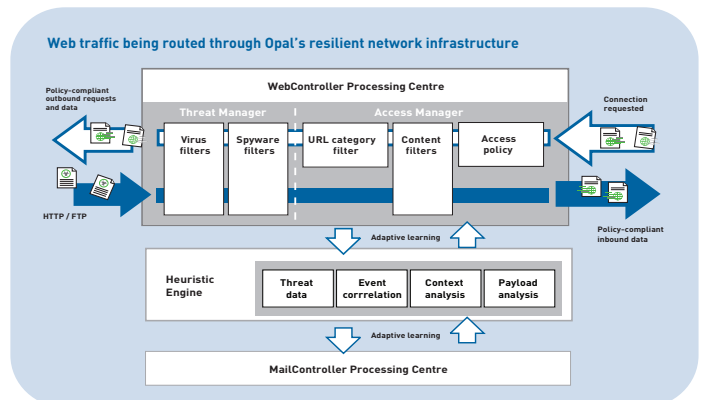

WebController's secure online portal empowers administrators with management and reporting capabilities that enable effective policy definition, enforcement, monitoring and reporting.

Granular policies can be defined for the whole business or down to an individual user. Real-time visibility of web traffic and threat data, together with the ability to make policy changes immediately, ensures that web security management matches the dynamic needs of the business. **Integration with MailController, our email security solution, gives you total Internet and email control.**

* Department of Trade and Industry. April 2006. UURN 06/806
